

My daughter Safia, aged 5 years had **Drooping of Eyelids (PTOSIS)**. Doctors told us that the optic nerve is weak the surgery can be done only after 16 years of age. I found the address of Dr Kranthi Vardhan through a forum in the Internet. I contacted him, he asked us to come to Hyderabad and show my daughter in person. We flew to Hyderabad, met him and he advised us for Akshi Tarpanam for almost 15 days and for 3 cycles. There is a very good improvement in my daughter's condition about 70% after treatments. We are very happy after coming to KAC and our Best wishes to the Doctor and his disciplined Therapists who have handled my daughter gently with utmost care and concern.

**Mohammed Hameed for Safia,
Bahrain.
