

For seven years of our marriage my wife and I tried to conceive a child. Right now I am aged 34, my wife, 29. We were not successful although the doctors in US told us 'Nothing was wrong' after a battery of tests. We went to a different doctor who repeated the tests and found out that my wife had hypothyroidism and hormonal imbalance. For which he prescribed Eltroxin tablets and other hormone course. Even after using the medicines for almost 5 years there was **NO FERTILITY**.

In the meantime, my wife's father who is a professor in Osmania University, Hyderabad came to know about Dr Madhuri Vardhan and Dr Kranthi Vardhan from his colleague who had undergone artificial insemination and invitro-fertilization without success. But then after seeing these Ayurvedic doctors for only one month, she became pregnant. We soon found the name of the Institute as THE KERALA AYURVEDIC CARE, Speciality Panchakarma Centre, Hyderabad. We called and made an appointment.

We were very happy that these Doctors have spent so much time with us listening to our complete history and gave us so much comfort and assurance with their soothing words and that they would be able to help us to have a baby. They monitored diet, documented exercise and relaxation habits, but most importantly, the doctor couples made us feel we were really going to realize our goal.

My wife underwent specialty treatments for 3 consecutive menstrual cycles as per doctor's strict advice and she got conceived and finally by the grace of god and the doctors she delivered a male child who is healthy and active. We are very grateful to Dr. Madhuri Vardhan and Dr Kranthi Vardhan for making this dream come true for us. Thank you and GOD BLESS YOU!
