

I, Narsing Rao, 72 years had a **PARALYSIS** attack on 5th June 2006. I was immediately taken to Yashoda Hospital where the emergency Treatment was done. I had stiffness in my left leg and left hand, slurring of speech, my sugar levels were high around 308 mg/dl and my MRI showed a 5 mm infarct in Right Frontal and Para Sagittal Region. I was treated for a week with 15 % improvement.

My son was not happy with the treatments given there, after enquiring some of his friends brought me to Dr Kranthi Vardhan at his KAC, Basheerbagh, Hyderabad on 11th day after attack. He saw all the reports and assured us the best results. The Panchakrma Therapy was started, I immediately felt much better and the Treatments continued for a period of 1 month. The researched internal medicines were given. I had improved 90% within 3 months and I was advised to use the medicines for 6 more months. I am hoping to become very normal in the coming days. I thank wholeheartedly Dr Kranthi Vardhan and the staff for giving me a peaceful and healthy life again.

Narsing Rao, Business,

Ashok Nagar, Hyderabad.
